## SUMMARY

Data Product and Technical Product professional with 5+ years of experience spanning financial data products, enterprise data platforms, product requirements, data analytics, data engineering, and AI/GenAI enablement across financial services, consulting, and enterprise technology environments. Experienced in translating business requirements into data product specifications, analytical solutions, workflow improvements, data models, and AI-ready data frameworks, partnering with product, engineering, analytics, QA, and business stakeholders. Managed 10+ financial data products, supported pricing and risk analytics across 500+ projects, and delivered measurable improvements including 70% faster workflow turnaround, 12% lower payment delays, and 100+ hours of monthly manual-effort reduction. Combines strong business and technical foundations with an MBA from IIM Tiruchirappalli and B.Tech. from NIT Tiruchirappalli.

## EXPERIENCE

### The Digital Fifth

Associate Consultant

Mumbai, India  
Jan 2026 – Present

- Lead enterprise data platform modernization initiatives across a Cloudera Hadoop Data Lakehouse, implementing **10+** architectural upgrades supporting data standardization, availability, and AI/ML readiness.
- Design AI/ML context frameworks and enterprise data structures, translating complex source-system data into business-aligned entities and relationships for GenAI use cases.
- Develop Knowledge Graph frameworks to represent organizational context and relationships across documented and undocumented enterprise data sources.
- Refactor SCD2 data marts and dimensional models, optimizing surrogate-key generation, effective-date logic, and dimensional attributes while preserving historical data integrity.
- Define and maintain Source-to-Target (S2T) mappings, data requirements, validation rules, and documentation across source systems, transformation layers, and downstream analytical datasets.
- Evaluate source-to-warehouse data ingestion, pipeline completeness, schema changes, and replication status, identifying data inconsistencies and strengthening enterprise data reliability.
- Partner with data engineering teams to analyze ETL performance, SQL joins, partitioning, compute utilization, and query execution, supporting improvements in pipeline throughput and analytical performance.
- Establish data validation, data quality, schema governance, and data contract frameworks to improve traceability, consistency, and reliability across enterprise data pipelines.

### Accordion

Business Manager

Hyderabad, India  
Apr 2024 – Apr 2025

- Managed the lifecycle of **10+** financial data products, translating business requirements into product specifications, analytical solutions, workflow requirements, and cross-functional delivery plans.
- Automated enterprise proposal and pricing workflows, reducing turnaround time by **70%** through structured data processing and workflow automation.
- Integrated financial models, pricing analytics, and competitor analysis into commercial decision workflows to support pricing evaluation and approval processes.
- Analyzed pricing and risk information across a **500+** project portfolio, presenting insights to senior stakeholders to identify vulnerabilities and support mitigation decisions.
- Synchronized customer and financial data across 8 BI platforms to identify high-impact accounts and support focused collection initiatives, contributing to a **12%** reduction in payment delays.
- Developed pricing analytics models across **500+** projects, identifying a reported **\$15M** ARR opportunity through pricing normalization across multi-regional datasets.
- Analyzed pricing variations across geographies and job roles, identifying underquoted engagements and supporting pricing standardization and revenue optimization.

### Citicorp Services India

Application Programmer

Chennai, India  
Jul 2019 – Jun 2022

- Modernized the hedge fund operations module of Citi's internal banking application, improving application access latency by **20%** through application and database enhancements.

- Redesigned 2 hedge fund reporting dashboards, integrating client and fund performance trends to improve operational reporting, data visibility, and user experience.
- Collaborated with Product, QA, and Engineering teams across Agile sprints, supporting requirements analysis, prioritization, testing, release management, and delivery with **80%** code coverage.
- Optimized SQL database and data pipeline architecture, reducing data-loading time by **50%** and improving query execution throughput by **70%** through targeted SQL indexing and database optimization.
- Automated data ingestion and operational workflows using Excel, eliminating **100+** hours of monthly manual effort and earning the Citi Copper Award for operational excellence.
